TITLE : ELECTRONIC EQUIPMENT

**ABSTRACT :** PURPOSE: To offer an electronic equipment of simple, inexpensive structure which has good operativity and reduces fatigue even in long-time use by providing a palm rest means which is turnable and can be put in the equipment housing at the front side end part of a keyboard to the equipment housing.

CONSTITUTION: The palm rest 8 is turned around bosses 8a as shown by an arrow P and stored as shown by a two alternate long and short dashes line when the equipment is not used. At this time, lock means such as claws are provided between side plates 8c nearby the bosses 8a and flanks of the equipment housing 5 so that the palm rest 8 does not move at a store position shown in a figure. While the palm rest 8 is open, the flat part 8b of the palm rest 8 forms a slanting surface connecting with a keyboard part and an operator can rest his or her hands on the part during operation and place his or her wrist parts on the palm rest 8 at any time, so the fatigue is small and the operation efficiency does not decreases even when the equipment is used for a long time.
